SUMMARY

Software engineer with hands-on experience building production systems and deploying ML applications. Skilled in Python, API design, and integrating complex systems into real workflows. Strong background in end-to-end system design, from data handling and tool integration to evaluation and deployment. Proven ability to turn technical requirements into reliable, production-ready systems.

SKILLS

Languages & Frameworks: Python, Java, TypeScript, React, Next.js, Node.js, Express, Spring Boot, Flask

Software Development Practices: Data Structures & Algorithms, Schema Design, Git, RESTful API Design

Cloud & Databases: GCP, Docker, SQL, PostgreSQL, MongoDB, MySQL, Neon, Supabase.

AI & Data Science: Predictive Modeling, Data Analysis (Pandas, NumPy), Data Visualization (Matplotlib, Seaborn, Plotly)

PROFESSIONAL EXPERIENCE

Glenysys Technologies Inc

Illinois, USA

Software Developer

10/2024 – Present

- Architected and deployed a Spring Boot 3 and PostgreSQL warehouse management system on GCP, exposing 20+ REST endpoints across five core domain services with Flyway-managed schema versioning for zero-downtime migrations. [**Spring Boot, PostgreSQL, GCP**]
- Designed environment-based configuration separating dev and prod profiles, including tuned HikariCP connection pooling (up to 20 concurrent connections in production) and externalized secrets management for secure, repeatable deployments.
- Built a SKU-level demand forecasting pipeline with lag, rolling, and calendar features and a walk-forward temporal split, benchmarking a linear regression baseline against a tuned XGBoost model (RandomizedSearchCV, 3-fold TimeSeriesSplit) that cut MAPE by 11.14% (35.21% to 31.29%) on an 8-week held-out window. [**Linear Regression, XGBoost**]
- Delivered a full-stack application using React and Zustand with real-time data visualization, designing clean APIs and user interfaces that integrate multiple data sources into cohesive workflows. [**React, Zustand, API Design**]

Accenture

Bangalore, India

Data Analyst

10/2019 – 07/2022

- Redesigned ETL processes and automated data quality checks in Medidata Rave, reducing clinical trial data discrepancies by 15% over 14 months. [**Medidata Rave**]
- Engineered a Python microservice that aggregated, validated, and standardized clinical trial data from 4–6 external sources into a single compliant pipeline, improving scalability and regulatory reliability. [**Python**]
- Designed and executed 280+ automated test cases in HP ALM, integrated them with CI/CD pipelines, and achieved 90% bug detection coverage, which reduced regression issues. [**HP ALM, CI/CD Pipeline**]

PROJECTS

Badminton Shuttle detection App: AI-Powered Match Analysis

Mobile app for automated badminton shuttle detection and analytics using computer vision

- Built a cross-platform mobile app using React Native, Expo, OpenCV, and FastAPI that processes badminton match video to automatically detect rallies and track shuttle movement end-to-end. [**React Native, Expo, FastAPI, OpenCV**]
- Implemented a YOLOv11 + TrackNet computer vision pipeline, achieving 85–90% shuttle detection accuracy at near real-time throughput across full match footage. [**YOLOv11, TrackNet, Computer Vision, Python**]
- Engineered a frame-level inference engine that classifies match events (serves, rallies, faults) and establishes an end-to-end ML pipeline from video input to structured analytics output. [**ML Pipeline**]

Volunteering Management Page

Web App developed to integrate user authentication, event browsing, and event signup.

- Built a full-stack web app using React, Flask, and PostgreSQL with user authentication, event registration, and real-time participation tracking, deployed on Heroku and containerized with Docker. [**React, Flask, PostgreSQL, Heroku, Docker**]
- Automated scraping of volunteer events using Python and BeautifulSoup on a 4-hour refresh cycle, maintaining an up-to-date catalog of 50–200 live events without manual intervention. [**Python, BeautifulSoup**]
- Designed a SQL-based analytics pipeline to evaluate volunteer participation trends, enabling data-driven decisions on event planning and resource allocation. [**SQL**]

EDUCATION

University of Colorado Boulder

Boulder, CO

Master's in Computer Engineering

08/2022 – 05/2024

BMS College of Engineering

Bangalore, IN

Electronics and Communication Engineering

08/2015 – 05/2019
